

## Why is preventive care so important?

Preventive care allows you to detect potential health concerns early before a more serious health issue shows up. It's much easier— and far less expensive — to address health problems now rather than to try to cure them once they occur.

## These benefits keep you healthy and well all year long

Providence Health Plan makes it easy for you and your dependents to get the preventive care you need, with most services covered in full by in-network providers. The best approach to staying healthy for life is to prevent illness from ever beginning. Your provider can advise you on what types of preventive care are best for you. The list below can help you get the conversation started.

## Available preventive services for you and your family

### Preventive care for adults:

- Abdominal aortic aneurysm screening for men ages 65 to 75 (one screening per lifetime)
- Anxiety screening
- Blood pressure screening
- Bowel prep formulary generic medications for adults age 45 and older (prescription only)
- For those at high risk for Cardiovascular Disease (CVD), obesity and overweight screening and behavioral interventions
- Cholesterol screening (one per calendar year)
- Colorectal cancer screening (colonoscopy, sigmoidoscopy, and fecal occult blood test) for adults age 45 and older; please note that some types of anesthesia for preventive colonoscopies are covered in full as part of the colonoscopy screening
- Contraceptive methods as required by law (Food and Drug Administration-approved), including sterilization procedures, over-the-counter birth control pill, patient education and counseling (abortifacient agents not covered)
- Depression and Suicide Risk screening
- Diabetes Type 2 screening (one per calendar year) and intensive behavioral counseling
- Domestic and interpersonal violence screening and counseling, at least annually
- Fall prevention for adults age 65 and older
