INSTRUCTIONS FOR USE: Company Medical Policies serve as guidance for the administration of plan benefits. Medical policies do not constitute medical advice nor a guarantee of coverage. Company Medical Policies are reviewed annually and are based upon published, peer-reviewed scientific evidence and evidence-based clinical practice guidelines that are available as of the last policy update. The Company reserves the right to determine the application of medical policies and make revisions to medical policies at any time. The scope and availability of all plan benefits are determined in accordance with the applicable coverage agreement. Any conflict or variance between the terms of the coverage agreement and Company Medical Policy will be resolved in favor of the coverage agreement. Coverage decisions are made on the basis of individualized determinations of medical necessity and the experimental or investigational character of the treatment in the individual case. In cases where medical necessity is not established by policy for specific treatment modalities, evidence not previously considered regarding the efficacy of the modality that is presented shall be given consideration to determine if the policy represents current standards of care.

SCOPE: Providence Health Plan, Providence Health Assurance, Providence Plan Partners, and Ayin Health Solutions as applicable (referred to individually as “Company” and collectively as “Companies”).

PLAN PRODUCT AND BENEFIT APPLICATION

Commercial

Medicaid/OHP*

Medicare**

*Medicaid/OHP Members

Oregon: Services requested for Oregon Health Plan (OHP) members follow the OHP Prioritized List and Oregon Administrative Rules (OARs) as the primary resource for coverage determinations. Medical policy criteria below may be applied when there are no criteria available in the OARs and the OHP Prioritized List.

**Medicare Members

This *Company* policy may be applied to Medicare Plan members only when directed by a separate *Medicare* policy. Note that investigational services are considered “**not medically necessary**” for Medicare members.

COVERAGE CRITERIA

- I. Genetic and molecular testing may be considered **medically necessary** when **ALL** of the following criteria (A.-D) are met:
 - A. Genetic Counseling general requirements have been met (see [Genetic Counseling policy, MP316](#)); **and**
 - B. The individual being tested meets **either** of the following criteria:
 1. The patient is symptomatic, and the clinical presentation is consistent with a known condition; **or**
 2. The individual is asymptomatic and meets **either** of the following criteria:
 - a. Individual has a first-degree blood relative (parent, sibling, or child) diagnosed with a condition **and** the affected relative has not had genetic testing and is unavailable for testing; **or**
 - b. Testing is for a known pathogenic variant confirmed in an affected first-degree blood relative (parent, sibling, or child); **and**
 - C. The condition being tested for is associated with increased morbidity or reduced life-expectancy; **and**
 - D. Clinical utility is established for tests as demonstrated by both of the following:
 1. Testing allows for a definitive diagnosis or risk classification when other clinical and/or laboratory tests were inconclusive **or** avoids more invasive diagnostic testing (e.g., muscle biopsy); **and**
 2. Testing results will guide decision(s) in clinical management (predictive, diagnostic, prognostic, or therapeutic).

- II. Genetic and molecular testing may be considered **not medically necessary and not covered** when there is sufficient evidence to demonstrate that the testing target or strategy is lacking clinical utility (See [Policy Guidelines](#)).
- III. Genetic and molecular testing may be considered **investigational and not covered** when the criteria above are not met.
- IV. Repeat testing of the same germline genetic content, for the same genetic information, is considered **not medically necessary and not covered**.

POLICY GUIDELINES

DOCUMENTATION REQUIREMENTS

In order to determine the clinical utility of a genetic test, the following documentation must be provided at the time of the request. Failure to submit complete documentation may affect the outcome of the review.

- Specific gene, trade or proprietary name of the test, or if a custom-built test, include every gene(s) and/or component of the test
- Name of laboratory where the testing is being conducted or was conducted
- Clinical notes to include the following:
 - Reason (indication) for performing test, including the suspected condition
 - Existing signs and/or symptoms related to reason for current test request
 - Prior test/laboratory results related to reason for current test request
 - Family history, if applicable
 - How results from current test request will impact clinical decision making
- All relevant CPT/HCPCS codes billed

DEFINITIONS

Clinical Utility

Clinical utility of any genetic test is established by evaluating the following components of the test:

- Eliminates the need for further clinical workup or invasive testing
- Leads to changes in clinical management of the condition that improve outcomes
- Leads to discontinuation of interventions that are unnecessary and/or ineffective
- Leads to initiation of effective medication(s) and/or changes in dosing of a medication that is likely to improve outcomes
- Leads to discontinuation of medications that are ineffective or harmful
- Provides prognostic information not revealed by standard laboratory and/or clinical testing that reclassifies patients into clinically relevant prognostic categories for which there are different treatment strategies

General Principles of Genetic Testing

All genetic tests must be Food and Drug Administration (FDA)-approved and/or performed in a Clinical Laboratory Improvement Amendments (CLIA)-accredited laboratory.

BACKGROUND

A genetic test is the analysis of human deoxyribonucleic acid (DNA), ribonucleic acid (RNA), chromosomes, proteins, and certain metabolites in order to detect heritable disease-related genotypes, mutations, phenotypes, or karyotypes for clinical purposes. Genetic tests may be used to detect newborn or adult genetic disease.¹ The tests should aid in the diagnosis or in the treatment of a disorder, including screening in appropriate populations. Genetic tests should have proven analytical validity along with clinical utility and validity, as evidenced in peer-reviewed literature.

Certain technologies, some of which are new and emerging, allow for testing multiple targets and/or genes at once, or testing in a large scale manner up to entire genomes. While the goal of testing with

these broad scope strategies may be increased efficiencies, the outcome of attaining results with no known or unknown clinical utility (variants of uncertain significance) has the potential to cause harm via the uncertainty of the results.²

REGULATORY STATUS

U.S. FOOD AND DRUG ADMINISTRATION (FDA)

Approval or clearance by the Food and Drug Administration (FDA) does not in itself establish medical necessity or serve as a basis for coverage. Therefore, this section is provided for informational purposes only.

BILLING GUIDELINES AND CODING

Some, but not all genetic tests may have a specific CPT or HCPCS code assigned. Some panels may be billed with unlisted codes (e.g. 81479 or 81599) while others may be billed with multiple gene-specific and/or molecular pathology procedure codes (81400-81408).

***Coding Notes:**

- The above code list is provided as a courtesy and may not be all-inclusive. Inclusion or omission of a code from this policy neither implies nor guarantees reimbursement or coverage. Some codes may not require routine review for medical necessity, but they are subject to provider contracts, as well as member benefits, eligibility and potential utilization audit.
- All unlisted codes are reviewed for medical necessity, correct coding, and pricing at the claim level. If an unlisted code is submitted for non-covered services addressed in this policy then it will be **denied as not covered**. If an unlisted code is submitted for potentially covered services addressed in this policy, to avoid post-service denial, **prior authorization is recommended**.
- **See the non-covered and prior authorization lists on the Company [Medical Policy, Reimbursement Policy, Pharmacy Policy and Provider Information website](#) for additional information.**
- HCPCS/CPT code(s) may be subject to National Correct Coding Initiative (NCCI) procedure-to-procedure (PTP) bundling edits and daily maximum edits known as “medically unlikely edits” (MUEs) published by the Centers for Medicare and Medicaid Services (CMS). This policy does not take precedence over NCCI edits or MUEs. Please refer to the CMS website for coding guidelines and applicable code combinations.
