

Faster Access to Breast Cancer Screenings

Timely breast cancer screening is a critical component of preventive care for Medicare patients. Through partnerships with Rayus and PMG Imaging, Providence Health Plan helps support faster access to breast imaging services, with many Rayus locations offering same-day and next-day appointments to reduce delays in screening and diagnostic care.

Timely care matters because early detection remains one of the most effective ways to improve outcomes and reduce barriers to treatment. Socio-economic and lifestyle challenges create a barrier to breast cancer screening for 70% of Medicare members not recently screened for breast cancer. To reduce barriers to these services, we recommend partnering with members to develop solutions to get a timely screening. Another option would be for staff to reach out to Rayus or PMG Imaging to schedule on the member's behalf.

Consider Rayus or PMG Imaging when patients need timely access to mammography or breast imaging services.
